To: Bussey, Donald
Subject: FW: SICR - Wedron, IL
Importance: High

Don,

This is a big ass report but do you have any comments on the first 12 or so pages. They are stating that UST #2 requires no further investigation. Let me know so we can shoot any comments to IEPA. I am going to have Weston Andris look it over also. He is our new contact at Weston, Lisa is now over at EPA

Thanks,
Steve

Subject: RE: well logs

We need a map illustrating the locations of the EPA replacement wells and also these two wells (all known replacement wells). This would help delineate the lateral extent of the historic plume. Then we could assess whether the plume is expanding horizontally (basically north and south) by sampling residential wells installed in the St. Peter presently outside of the plume due to the replacement wells shutdowns.

Subject: FW: well logs

Thanks to Jeff, who forwarded the well logs for the two deep shared wells that were put in back in Nov-Dec 1984. Both wells appear to be cased through the St. Peters sandstone as the ground water contamination had already been identified.

Speaking with Don today, his thoughts were the low level detects in IEPA samples G-223 and G219 which are tied to the shared well are not an immediate concern but we should resample next round and try to get the sample from as close to the well as possible. If it is the same design as the northern shared well, there is a buried vault with two pressure tanks and there should be a spigot that can be used to sample. Bob Debolt 815-228-2371 and Roy Chandler maintain these wells.

Although this Dropbox link is valid for 7 days, I recommend downloading the file upon receipt of this link.
Jacquie,

I enclose a Dropbox link to a Report entitled, "TECHNICAL MEMORANDUM HOXSEY PROPERTY INVESTIGATION ACTIVITIES," prepared by Civil & Environmental Consultants, Inc. dated December 2015. This Report supplements the administrative record for the Wedron Groundwater Site and the Hoxsey Property and is submitted on behalf of Wedron Lots 1-2, Block 9, LLC, Inette M. Godman and the Inette M. Godman Trust dated January 30, 1992. We will not be sending a paper copy of the Report (431 pages) to your office. The document is too large to email (43.5 MB). I enclose, as an attachment to this email, an abridged version of the Report (without Attachments). We will send a complete copy of the Report to you on a disk or thumb drive. Please let me know if you do not require physical delivery of the Report to your office. In any event, transmission of this Dropbox Link places the Report in its entirety into the administrative record. Please let me know if you disagree.

A complete copy of the Report has been delivered to the Illinois EPA via the Illinois Government uplink website. See File Transfer Confirmation attached. Please let me know if U.S. EPA has a website where I can upload the Report.

Subject: RE: BTEX Map and Trend Map

Hi Lisa,

How to best depict what I'm thinking of is to draw an oblong circle (a closed contour) around the locations of the replaced wells, and then the location of detections, above and below MCLs, which have shown up since installation of the replacement wells. Trying to visualize if the plume may be widening and elongating. The suspicion is that as the replaced St. Peter wells were "turned off" what, if any, is happening to the plume as other St. Peter wells are still pumping.

I'm out of here on leave in a half hour – will be able to see e-mail on my phone and will be able to take calls.

Subject: RE: BTEX Map and Trend Map

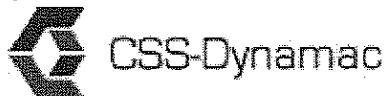

Don,

This map might show what you are asking for. All squares on this map represent residential wells that were sampled **after** the installation of the replacement wells. We have two instances of BTEX detected below MCLs in August 2015 – these are shown in the bottom right-hand corner of map (orange squares).

Do you want to maybe see us go back a little further? Maybe we use filled-in circles to show the round or two of sampling before the replacement wells were installed so we can see what the difference is?

Subject: RE: BTEX Map and Trend Map

I think we need one that shows whether any new wells in the St. Peter within the Village are becoming impacted subsequent to the installation of the replacement wells. However, right now I think there may be only one, and less than MCLs, so I don't think it would be too much help at the meeting. However, if someone can get the information as to where this well is located, and the newly detected concentrations, it would be great.

Subject: RE: BTEX Map and Trend Map

Don,

The wells were replaced in November 2013. So all the data on this map is after the wells were replaced. I thought the purpose was to show sampling results from the last couple of rounds of

sampling. IEPA had some BTEX hits in their August 2015 sampling and because of these hits, I thought Steve wanted to show results since replacement wells were installed.

Subject: RE: BTEX Map and Trend Map

I thought that the purpose of the trend analysis was to compare shallow wells (in the St. Peter) over time to evaluate the potential of plume footprint expansion subsequent to the installation of the replacement wells (as the shallow wells they replaced ceased pumping from the St. Peter). The way I read this, it is somewhat of a comparison of the contaminated well data from before replacement with the replaced well data from the New Richmond?

Subject: RE: BTEX Map and Trend Map

Don,

That is the way I am reading it also. All of the replacement wells are below MCL's although some BTEX compounds were detected at low levels. All of the well sampled by LaSalle County and analyzed by IEPA are below MCL's. The results at [REDACTED] are something we and IEPA should keep an eye on. I believe both of those private residents are tied into the second deep well installed back in 1985-86. Previously when we sampled that well we did not see any BTEX compounds above the detection limits.

Hello.

Attached is the updated BTEX Map which was revised based on Don's comments below. Also attached is a Draft trend map and the table used to create the trend map. Please review this and let me know if this is what you were looking for. Note that the IEPA sample that had the hit of 1.9 ug/L benzene [REDACTED] was only sampled by us once in the past on 3/23/12 and all VOCs were non-detect.

Steve, I only had one round of IEPA results. So we used EPA's last sampling round (April 2014) and IEPA's sampling round (August 2015). Please give me a call to discuss.

Don,

This map might show what you are asking for. All squares on this map represent residential wells that were sampled **after** the installation of the replacement wells. We have two instances of BTEX detected below MCLs in August 2015 – these are shown in the bottom right-hand corner of map (orange squares).

Do you want to maybe see us go back a little further? Maybe we use filled-in circles to show the round or two of sampling before the replacement wells were installed so we can see what the difference is?

Subject: RE: BTEX Map and Trend Map

I think we need one that shows whether any new wells in the St. Peter within the Village are becoming impacted subsequent to the installation of the replacement wells. However, right now I think there may be only one, and less than MCLs, so I don't think it would be too much help at the meeting. However, if someone can get the information as to where this well is located, and the newly detected concentrations, it would be great.

Don,

The wells were replaced in November 2013. So all the data on this map is after the wells were replaced. I thought the purpose was to show sampling results from the last couple of rounds of sampling. IEPA had some BTEX hits in their August 2015 sampling and because of these hits, I thought Steve wanted to show results since replacement wells were installed.

Subject: RE: EPA 2 Monitoring Well on [REDACTED] and [REDACTED]

Steve,

Thanks for the information and I was wondering if you had made any headway with LaSalle County Highway Department. From our call last week it sounded like a reduced bonding fee was possible because the wells would potentially be closed off after a round of sampling (targeted for late fall of this year).

Please let me know if this is your understanding and if you have made any progress with Larry Kinzer.

Asking this because GZA is moving forward with plans on abandoning all the wells except for those requested to be open (MW-1, 2, 3, 4, 6, and 7) by the USEPA and IEPA. That closure work will start May 2nd and Bernie will need to make arrangements for the LaSalle County bonding that same week.

Subject: EPA 2 Monitoring Well on [REDACTED] and [REDACTED]

Dave and Mike,

The best survey map we had was the one GZA produced showing the location of monitoring well EPA 2 on the corner of [REDACTED]. This well was covered with silt, sand and road wash as the water does run down [REDACTED]. I will look up to see what photos we have. Is it possible to get the GPS lat and long from GZA or their surveyor on EPA 2? I don't think we put a magnet or piece of metal in this flush mount but the metal on the flush mount may be detected with a metal detector. If you need me to come out to assist in finding this well let me know. I can also use Weston to come out and assist if needed.

Also, I will call Larry Kinzer with LaSalle County Hwy Dept and talk to him about the bond for the monitoring wells. I will let you know if we need to all get on the phone with him.

Thank you,

Steve Faryan, USEPA

On-Scene Coordinator

Mike,

I spoke with Larry Kinzer LaSalle County Hwy Commissioner and he will waive the bonding requirement on the monitoring wells on the County Right of way. I explained to him that Wedon silica would be closing the wells in the Fall of 2016. I will send an email to him and copy you so we have this documented.

Thanks,

Steve Faryan, USEPA

Steve,

That sounds great.

So that he receives your reply as soon as possible, please include Bernie Fenelon on your response (respond to all with your e-mail).

I am asking for this because my travels later today are through parts of Wisconsin with very spotty cell service.

Thanks,

Mike

Subject: RE: EPA 2 Monitoring Well on [REDACTED]

Steve,

Thanks for the information and I was wondering if you had made any headway with LaSalle County Highway Department. From our call last week it sounded like a reduced bonding fee was possible because the wells would potentially be closed off after a round of sampling (targeted for late fall of this year).

Please let me know if this is your understanding and if you have made any progress with Larry Kinzer.

Asking this because GZA is moving forward with plans on abandoning all the wells except for those requested to be open (MW-1, 2, 3, 4, 6, and 7) by the USEPA and IEPA. That closure work will start may 2nd and Bernie will need to make arrangements for the LaSalle County bonding that same week.

Subject: EPA 2 Monitoring Well on [REDACTED]

Dave and Mike,

The best survey map we had was the one GZA produced showing the location of

monitoring well EPA 2 on the corner of [REDACTED] This well was covered with silt, sand and road wash as the water does runs down [REDACTED] I will look up to see what photos we have. Is it possible to get the GPS lat and long from GZA or there surveyor on EPA 2 ? I don't think we put a magnet or piece of metal in this flush mount but the metal on the flush mount may be detected with a metal detector. If you need me to come out to assist in finding this well let me know. I can also use Weston to come out and assist if needed.

Also, I will call Larry Kinzer with LaSalle County Hwy Dept and talk to him about the bond for the monitoring wells. I will let you know if we need to all get on the phone with him.

Thank you,

Steve Faryan, USEPA

Don,

Jeff Guy and I just got off the phone with Mike Melton from Fairmont Minerals. They want to close all the monitoring wells on their property and in the Village. This is due to costs and potential liability.

Could you take a quick look at the attached map and give me your opinion of the minimum amount of monitoring wells out in the village or on Fairmont Minerals property that should stay in place at this time to monitor the plume and monitor ground water flow in Wedron.

Jacque and Tom:

Fairmont Minerals has asked if once we select what wells need to stay, if the 'ownership and maintenance of these wells could be transferred to another party. Please let us know you opinion on that or if there is a way we can keep Fairmont Mineral from closing the wells for a period of time based on their UST investigations on their property.

Thanks,

Steve,

Just a quick update. The small monitoring well the IEPA installed for USEPA back in 2012 was abandoned yesterday by slowly filling the casing with bentonite chips. I have attached the photo of that well.

Additionally, we are probably a few weeks away from a drilling subcontractor mobilizing to Wedron to abandon all the 2" diameter monitoring wells Fairmount and Lockheed Martin installed for the AOC and LUST project. We are doing this because both projects are finished and the wells need to be properly abandoned to comply with applicable codes.

I will send you another e-mail a day or two prior to the driller arriving in town. I want you to know what is going on in the event that a local resident calls the USEPA with a concern over activity in and around Wedron.

I trust everything is going well.

Mike

Subject: RE: USEPA monitoring well at Technisand.

Steve,

I have a few things to update you on.

First, we will bentonite chip up that small piezometer within the next month or so when the weather favorable.

Second, note that we have received the IEPA NFR for the small historic gasoline UST release over by the office. I have attached a copy of the submittal to the IEPA needed for the NFR.

Because we are at the end of this process, we are looking to properly abandon the various groundwater monitoring wells that we historically installed on company property and around town. We will look to abandon those monitoring wells within the next few months. I wanted to let you know of this in case you received a call from the folks around town when they see a contractor in town doing that work.

Please let me know if you have any questions.

I hope things are going well.

Subject: USEPA monitoring well at Technisand.

Steve,

I left you both office and cell voice mails about an old geo-probe monitoring well (TMW-9) the USEPA had the IEPA drill/install in July 2012.

TMW-9 is located off the SE corner of the warehouse at Technisand. That facility has a pending project to add a structure on the east side of the warehouse and the monitoring well is sort of in the way.

The well has not been used for some time should be closed. I can do it if it would be lots of paperwork for you to take care of. I can get a bag of bentonite chips, slowly fill the casing with chips and then cut the casing off a few feet below grade. I would probably target two weeks from now to do the work because of the holiday next week.

When you have a few minutes, let me know your thoughts on this.

I hope everything else is going well for you...not any crazy emergency work.

Have a good holiday next week.

Subject: FW: IR final report review

Andris,

Can you assist me in reviewing the Illinois RR response and comment letter. I will read it over again and make sure they included all of our comments also. We are looking to make sure there are no conclusory statements in the report like Bob identified in page 4-2.

I am in the field all of next week also and I know you have been very busy. I was shooting to get Jacque some word by Thursday or Friday of next week. Will that work for your schedule?

Subject: IR final report review

Hi Steve – here are both the SI report and the response from IR to our July letter. Let me know as soon as you can whether you see anything that needs modification in addition to the conclusory statement on page 4-2 related to groundwater monitoring results. I'm copying Don, too, in case you want him to look it over. Bob did not identify anything other than the page 4-2 statement that should be raised to IR's attorney. Thanks-Jacque

Subject: RE: USEPA comment letter to finalize the Site Investigation Report

Steve – do you have a moment to chat before I make the final revisions? I just want to clarify your comments. The following are the revised sections. I will call shortly to see if you are available to discuss and hopefully finalize this once and for all.

thanks

Executive Summary

The geology consists of approximately 2-5 feet of gravelly or silty sand overlying sandy and clayey silts. Sand and gravel seams were observed throughout. Sandstone was encountered in this area at approximately 18 to 25 feet below ground surface (bgs). Depth to groundwater as observed in the four monitoring wells ranged from approximately 13.8 feet bgs in MW-15 (507 msl) to 27.8 feet bgs in MW-13 (502 msl). The range is expected due to the variance in the surface elevations encountered.

Section 3.1

The surficial geology consists of approximately 2-5 feet of gravelly or silty sand overlying sandy and clayey silts. Sand and gravel seams were observed throughout. Sandstone was encountered in this area at approximately 18 to 25 feet bgs. Depth to groundwater as observed in the four (4) monitoring wells ranged from 13.82 feet bgs in MW-15 (507.46 msl) to 27.84 feet bgs in MW-13 (501.41 msl). See Table 3 below.

Section 4

- The groundwater results indicate BTEX levels are below the groundwater remediation objectives for Class I groundwater in monitoring wells MW-12, MW-13, and MW-14. MW-15 was the only monitoring well with Class I RO BTEX exceedances (benzene and ethylbenzene).
